

How to Properly Recycle and Dispose of Battle Born LiFePO₄ Batteries

At Battle Born, our goal is to provide our customers with long-lasting green energy that will support them for years during all their adventures. That is why we not only build batteries that can keep up with you for a long time but also provide industry-leading customer support to help you get the most out of your batteries.

When the time comes and your LiFePO₄ batteries have reached the end of their lifetime, it is important to recycle and dispose of them responsibly.

Here are a few suggestions:

1. Make sure all loads are removed from your system before removing the batteries. Once the batteries are removed, cover the terminals with electrical tape. Now is also a good time to inspect any cable runs or lugs.
2. Find a recycling drop-off location near you. Visit [Earth911.com](https://www.earth911.com) or [Call2Recycle.org](https://www.call2recycle.org) and search based on your location. Be sure to call ahead of time to confirm that the location is currently accepting materials.
3. Give our Battle Born Technical Specialists a call if you have any trouble finding a drop-off location, and we can help you find one!
